

Eduard Joseph D. Mendres

Computer Technology Student | Software Development, Web Development & Networking
Josepheduard87@gmail.com | 0928-629-7200 | www.linkedin.com/in/e-j-m/ | Mandaue City, Cebu

SUMMARY

Computer Technology student at Cebu Technological University with hands-on experience developing desktop applications, web applications, and networking solutions. Built a fully offline Raspberry Pi educational kiosk integrated with an Android app to support Arduino learning. Proficient in C#, Python, Kotlin, and JavaScript, and seeking an internship where I can contribute to real-world software development or IT projects while continuing to grow my technical skills.

EDUCATION

Cebu Technological University – Main Campus

Expected: 2027

Bachelor of Industrial Technology, Major in Computer Technology

PROJECTS

E-Learn Mo: Offline Kiosk Tutorial Arduino Components Kit

Jan 2026 – Jun 2026

HTML, CSS, JavaScript, Kotlin, XML, Python, Raspberry Pi, Arduino

- Developed a fully offline educational kiosk integrating a web interface, Android app, and Raspberry Pi server enabling students to independently learn Arduino sensors through structured, hands-on tutorials.
- Built a local hotspot-based data pipeline between the Raspberry Pi and Android app, allowing instructors to receive real-time student progress notifications with zero internet dependency.
- Created interactive learning modules featuring component information, wiring diagrams, hardware requirements, sample Arduino code, and completion tracking.

eBuildMo Computer Shop

2024

C#, WinForms, SQLite

- Designed and developed a full-stack e-commerce system for computer hardware sales, including customer, administrator, marketing, and delivery management modules.
- Built database-driven features for inventory tracking, price management, employee administration, and order processing using C# and SQLite.
- Implemented delivery tracking and order status updates, enabling customers to view package progress and staff to manage fulfillment workflows efficiently.

LAN Network Design & Configuration

2024

TCP/IP, Cisco Packet Tracer, Router & Switch Administration

- Led a team project designing and configuring a Local Area Network connecting workstations, a printer, router, and switch applying TCP/IP addressing and subnetting concepts.
 - Simulated the full network topology in Cisco Packet Tracer prior to physical deployment, validating IP addressing, subnetting, and device connectivity across all 15 workstations.
 - Verified physical network functionality through end-to-end testing of file sharing and printing services across all connected workstations, confirming stable LAN performance.
-

TECHNICAL SKILLS

Programming Languages: C#, Python, SQL

Web Technologies: HTML, CSS, JavaScript

Tools & Platforms: WinForms, SQLite, Raspberry Pi, Arduino, Android Studio, Visual Studio

Networking: LAN Configuration, TCP/IP, Router & Switch Administration

Other: Wiring Diagrams, Embedded Systems, Local Network Deployment
